Lavish™ Lavenders

Lavandula hybrid

Lavish™ Rose 'Lav1412'[®] Lavish™ Musk 'Lav1438'[®]

Lavish™ Lavenders have been bred in Australia by Paradise® Plants and are a breakthrough in Lavender breeding. Regular Lavenders have just a few wings at the top of the flower, whereas Lavish™ Lavenders have highly fragrant, gorgeous wings all the way down the flower head, creating double the impact. The bigger the plants get the more flowers they produce. Bred in Australia for Australian conditions, these compact lavenders are perfect for low hedging or containers as colourful feature plants. Grow in a sunny, well drained position. Feed in spring and summer and prune lightly after flowering to maintain shape. Protect from heavy frost. Drought tolerant once established.

habit: low growing, compact form

height: 50cm

colour: Lavish™ Rose - mid pink wings Lavish™ Musk - soft pink wings

use: low hedges, pots and feature planting

NOTE:

Compact, rounded habit and compound cymeous spike (wings all the way down the flower head).
